#### **DEFINITIONS**

IDA publishes the following documents to report the results of its work.

#### Reports

Reports are the most authoritative and most carefully considered products IDA publishes. They normally embody results of major projects which (a) have a direct bearing on decisions affecting major programs, (b) address issues of significant concern to the Executive Branch, the Congress and/or the public, or (c) address issues that have significant economic implications. IDA Reports are reviewed by outside panels of experts to ensure their high quality and relevance to the problems studied, and they are released by the President of IDA.

#### **Group Reports**

Group Reports record the findings and results of IDA established working groups and panels composed of senior individuals addressing major issues which otherwise would be the subject of an IDA Report. IDA Group Reports are reviewed by the senior individuals responsible for the project and others as selected by IDA to ensure their high quality and relevance to the problems studied, and are released by the President of IDA.

#### **Papers**

Papers, also authoritative and carefully considered products of IDA, address studies that are narrower in scope than those covered in Reports. IDA Papers are reviewed to ensure that they meet the high standards expected of refereed papers in professional journals or formal Agency reports.

#### **Documents**

IDA Documents are used for the convenience of the sponsors or the analysts (a) to record substantive work done in quick reaction studies, (b) to record the proceedings of conferences and meetings, (c) to make available preliminary and tentative results of analyses, (d) to record data developed in the course of an investigation, or (e) to forward information that is essentially unanalyzed and unevaluated. The review of IDA Documents is suited to their content and intended use.

The work reported in this document was conducted under contract MDA 903-89 C 0003 for the Department of Defense. The publication of this IDA document does not indicate endorsement by the Department of Defense, nor should the contents be construed as reflecting the official position of that Agency.

# **PREFACE**

This document was prepared by the Institute for Defense Analyses (IDA) for the Office of the Assistant Secretary of Defense (Force Management and Personnel), under contract MDA 903 89 C 0003, Task Order T-Q7-1087, issued 20 April 1992. The objective of this task is to design a survey instrument and conduct analyses of the survey response data to determine access to and utilization of medical care services as well as the attitudes and knowledge of military medical care beneficiaries regarding various aspects of their health care benefits. This document serves as an interim report on progress to date on the development of the survey.

This work was reviewed within IDA by Dr. Arthur Fries and Mr. Christopher Jehn. It was also reviewed by two independent consultants, Dr. Barbara Bailar and Dr. Wray Smith.

# I. SURVEY REQUIREMENTS AND BACKGROUND

This document describes the progress to date in the development of the 1992 Department of Defense (DoD) survey of military medical care beneficiaries. It includes a description of the steps preceding the analysis of the survey, including the design of the survey instrument (questionnaire), pretest results, sample design, survey administration, and data preparation steps. The purpose of the report is to inform DoD officials and analysts responsible for formulating military health care policies about the considerations that influenced the design of the survey, so that they may more easily interpret, and assess the reliability of, the survey results.

#### A. CONGRESSIONAL MANDATE

The Congress, through enactment of the National Defense Authorization Act for Fiscal Years 1992 and 1993, Section 733, directed the Department of Defense to conduct a survey of military medical care beneficiaries regarding the quality and availability of health and dental care. According to the National Defense Authorization Act, 'the study required by Sec. 733, subsection (a), shall ... include a survey of members of the Armed Forces and covered beneficiaries in order to —

- (1) determine their access to and use of inpatient and outpatient health care services in the military medical care system
  - (A) by source of care and source of payment, including private sector health insurance; and
  - (B) in relation to civilian sector standards established for particular clinical services.
- (2) determine their attitudes and the extent of their knowledge regarding
  - (A) the quality and availability of health and dental care under the military medical care system;
  - (B) their freedom of choice with respect to health care providers and level of health care benefits;
  - (C) the premiums, fees, co-payments, and other charges imposed under the military medical care system; and
  - (D) any changes in the rules, regulations, or charges that characterize the military medical care system."

The same legislation directed the DoD to report the intermediate results of its study by December 1992 and the final results by December 1993.

The congressional tasking was analyzed, and it was determined that a number of issues could be addressed only by the survey. These issues received the highest priority. Other issues could be addressed either by the survey or by other means. Many of these issues were also included in the survey. The decision on inclusion was based on the potential length and complexity of the questionnaire.

# **B. SURVEY REQUIREMENTS**

In addition to the congressional mandate, there are other reasons why a survey of beneficiaries is needed. The last comprehensive survey of beneficiaries was conducted in 1984, over eight years ago. Since 1984, many significant changes have been made to the Military Health Services System (MHSS). These include cost containment measures such as paying civilian hospitals according to diagnosis-related groups, I financial changes for beneficiaries such as higher CHAMPUS (Civilian Health and Medical Program of the Uniformed Services) outpatient deductibles and co-payments, and changes in the administration and delivery of health care designed to reduce costs to both the government and the beneficiary.

Because there are now many different variations of the military medical benefit, it is necessary to determine the level of satisfaction with each separately. It would also be useful to know the level of satisfaction with the current system relative to satisfaction as measured in the 1984 survey. Before military health care costs can be reduced, subject to maintaining the current level of beneficiary satisfaction, it is important to learn what matters most to beneficiaries

Another vital function of the survey is to provide data on utilization levels by beneficiary class. Some gaps in the MHSS health care utilization data sources, particularly for outpatient care, cannot be filled practically from other sources. DoD has access to data on utilization of military health facilities and CHAMPUS-reimbursed utilization levels. However, we do not know the extent to which beneficiaries use the civilian system for health care not paid for by DoD.

Knowledge of utilization levels helps in responding to issues that arise about the consumption of care by military beneficiaries relative to non-beneficiaries. Do military beneficiaries consume more health care than civilians outside the MHSS? If so, are there reasons such as military requirements (pre-flight physicals, occupational injury) for these differences?

<sup>&</sup>lt;sup>1</sup> This is a classification scheme for standardizing and limiting payments for inpatient care used by Medicare and other civilian payers.

Utilization information also is important in forecasting future demand for DoD-funded health care. For budgetary planning, DoD might find it useful to be able to predict utilization on the basis of personnel characteristics. For people with other coverage, DoD is the payer of last resort, which means that an increase in unemployment or in jobs without health benefits in the overall economy can increase demand for DoD-financed care.

#### C. SURVEY INSTRUMENT DESIGN CONSIDERATIONS

Important considerations in the design of the survey instrument included:

- Coverage of congressional and DoD issues. It is important to ensure that the
  questionnaire requests the required information about beneficiary access and
  satisfaction. This information can only be provided by the survey. Efforts were also
  coordinated with other team members to include questions about utilization,
  because there is no up-to-date data source on beneficiaries' utilization of medical
  care that is not provided by military treatment facilities (MTFs) or CHAMPUS.
- Beneficiary privacy and sensitivity. Beneficiaries will be asked about issues relating to their health and the health of their families. These are issues that many people regard as personal and private.
- Beneficiary concern about health benefits. The questionnaire contains items eliciting opinions about various alternatives to the current military health benefit, including military and civilian health maintenance organizations (HMOs). It is important to make it clear to beneficiaries that these questions are for research purposes only.
- Form constraint. To limit costs of gathering data, it was decided that the form had to be completely scannable. A completely scannable form allows the survey responses to be entered directly into the computer without the need for any manual entry.
- Time to complete the survey form. Based on previous survey experience, it was decided that 30 minutes was a reasonable maximum time to complete the questionnaire without significantly decreasing response rates.
- Questionnaire complexity. Good questionnaire design requires a simple
  questionnaire. Unfortunately, the subject matter requires complex sets of
  questions. For example, overall satisfaction depends on health status of the
  patient, accessibility of facilities, resources at facilities, treatment by medical and
  non-medical staff, and treatment outcomes.

# D. OVERVIEW OF QUESTIONNAIRE DESIGN PROCESS

The questionnaire was designed in five phases:

- · framework development,
- · initial design,
- iterative revision,
- pretest, and
- final approval and revision.

The framework development phase began with a meeting with the Survey Working Group to define goals. Project staff included staff members from the Office of the Assistant Secretary of Defense (Force Management and Personnel) [OASD(FM&P)], Institute for Defense Analyses (IDA), Vector Research Incorporated (VRI), and consultants. The project staff worked closely with the joint Survey Working Group, which consisted of representatives from the Office of the Secretary of Defense (OSD), the military services, and the Office of Management and Budget (OMB). OASD(FM&P) staff, working with IDA, identified additional issues and held individual meetings with the Survey Working Group members to solicit any additional issues or questions they felt were important to include in the questionnaire. Table I-1 shows the Health Care Survey issues that were contained in the congressional mandate as well as those identified by project staff.

Table I-1. DoD Health Care Survey Issues

#### A. Congressional issues:

- 1. Access to and use of inpatient and outpatient health care services.
- 2. Attitudes and knowledge regarding military health care benefits and services

#### B. Other Issues:

- 1. Valuation of health care benefits.
- 2. Utilization of preventive health care services.
- 3. Satisfaction with obstetrical/gynecological (OB/GYN) services.
- 4. Expected utilization of health care facilities in the future.
- 5. Hypothetical use of new kinds of health plans.

The design phase began with the collection and review of related survey instruments (descriptions of the related instruments are contained in Chapter II). Next, questions were selected and adapted from other surveys that related to the issues identified in Table I-1. Additional questions were constructed as necessary to cover all the issues.

Once all the essential issues were covered, an initial draft of the questionnaire was developed. The order of the questions was changed to improve the question flow for the respondent. This meant moving from simpler to more complex questions and moving from less sensitive to more sensitive topics. Questions were consolidated by grouping together those that had similar topics and response patterns, and the questions were grouped by subject area. Project staff then put together a draft questionnaire for review.

The next stage was iterative revision. The questionnaire was provided to the Survey Working Group and the Integration and Study Management Group (the latter is responsible for overseeing and coordinating the efforts of researchers involved in the evaluation of the cost of wartime and peacetime medical care, the survey of military medical care beneficiaries, and an assessment of the quality of medical care provided to beneficiaries) for comment. In response to those comments, wording was revised, questions rearranged into a logical order, and additional "skip logic" devised to route respondents around items that did not apply to them.

Next, the questionnaire was pretested at three different sites with a variety of respondents. The pretest results are described in Chapter III. The questionnaire was revised to reflect the lessons learned from the pretests.

The final stage was the final approval and revision. After a final review within OSD, the instrument was sent to the Defense Manpower Data Center (DMDC) for printing and distribution. The final instrument is described in Chapter IV and is reproduced as Appendix A. The plan for drawing the sample of approximately 45,000 potential respondents is contained in Chapter V, and the survey schedule and preparations for analysis are presented in Chapter VI.

# II. REVIEW OF PRIOR SURVEYS

#### A. INTRODUCTION

In this chapter, we describe the survey instruments that were reviewed for potential questions. The initial survey instrument consisted of questions drawn from these surveys, reworded or rescaled to provide a consistent format. The survey instrument was then augmented with original questions to cover the issues raised by the congressional tasking.

#### B. SURVEYS REVIEWED

We reviewed relevant past surveys, some of which were recommended and provided by OASD(FM&P), DMDC, and other members of the Survey Working Group. The surveys included health-related surveys commissioned by DoD, non-health-related surveys commissioned by DoD, and health-related surveys commissioned by other government agencies. A description of each of the surveys follows.

# 1. 1984 DoD Health Care Survey

The 1984 DoD Health Care Survey had several goals that were similar to those of the current survey [1]. First, the survey measured access to medical care facilities, in terms of physical, economic, and practical access. The survey also addressed the utilization of health care services in the Military Health Services System and the extent of coverage by other health insurance. The 1984 survey had separate sections for attitudes and satisfaction of the beneficiaries. Finally, the survey covered knowledge of current benefits, potential use of the Military Health Services System, and basic demographics. Because the instrument for this survey was designed to collect information on similar issues of beneficiary behavior and perceptions, it is directly relevant to the current effort.

# 2. Catchment Area Management Baseline (1989) and Follow-up (1992) Surveys, and CHAMPUS Reform Initiative Baseline (1988) and Follow-up (1990) Surveys

The RAND Corporation designed these questionnaires for evaluations of CHAMPUS initiatives. They have a common structure and many questions in common. Questions covered health status, usual source of care, utilization levels, access, and satisfaction. There was also considerable detail on insurance coverage, including type of

coverage and source of payment. The CAM evaluation instrument, titled "Medical Care Evaluation Study," also contained several questions about enrollment in the new programs and satisfaction with them. Review of these questionnaires was very useful in designing questions for the current survey.

# 3. Survey of Veterans (1987)

This survey was conducted in two interviews, which included questions on the following topics:

- background/personal information,
- disability status,
- sources of payment for health care, insurance coverage,
- use of health care (frequency, type of care),
- medical history,
- knowledge of Veterans Administration (VA) benefits,
- personal assets/debts,
- assets/debts of spouse and children,
- use/knowledge of job training programs,
- · residence history, and
- welfare/assistance history.

# 4. Survey of VA Medical System Users (1991)

This survey asked questions similar to those in the 1987 Survey of Veterans.

# 5. U.S. Army Satisfaction With Medical Care Survey (1992)

This survey addressed most of the issues required in the current effort, without being as complicated as the 1984 beneficiary survey. Like the current effort, it involved a self-administered questionnaire. It did not address beneficiary knowledge of CHAMPUS rules or general familiarity with the Military Health Services System. Questions were derived from the Group Health Association of America survey. Questions related to:

- satisfaction with access to medical care.
- satisfaction with quality of medical care,
- satisfaction with freedom of choice in medical care.
- other types of health benefits.
- use of MTF and private health care,
- use of preventive care,
- MTF/Medicare preferences for beneficiaries age 65 and older,
- background/personal information, and
- familiarity with/enthusiasm for the Coordinated Care Program.

# 6. 1989 Department of Defense Women's Health Survey

The 1989 Women's Health Survey was conducted for the Assistant Secretary of Defense for Health Affairs by the Defense Manpower Data Center. The purpose of the survey was to evaluate the adequacy of health services for women on active duty in the military services.

The questionnaire included 86 closed-ended questions contained in four sections. The first covered the standard background and demographic issues which we have noted in other health care surveys. The second section was entitled 'Recent use of medical care facilities" and was concerned with the accessibility and quality of the care received in the facility. The third section addressed 'OB/GYN Care" and the last dealt with 'Other women's health issues."

The questionnaire asked active-duty women to describe their recent use of medical facilities. Women were asked to rate their satisfaction with their last visit to a military treatment facility and to rate their satisfaction with obstetrical/gynecological (OB/GYN) care at MTFs. In addition, women were asked about access to and satisfaction with routine preventive and pregnancy care. The questionnaire is highly polished and has a professional look. There is a separate page at the end for written comments.

# 7. 1990 DoD Dependents Dental Plan Survey

This survey was designed to obtain the opinions of military personnel about benefits under the Dependents Dental Plan (DDP \* Delta), information related to potential expansion of these benefits, and reasons why unenrolled eligible personnel are not participating in the plan.

DDP enrollees were to be asked to rate their satisfaction with access, quality, and coverage. All respondents were to be asked whether or not they would enroll in two expanded plans. The survey was never fielded due to lack of funding. Nevertheless, it was reviewed for background on dental issues and as a source of questions about dental care.

# 8. U.S. Air Force Health Care Survey (1988 and 1990)

The surveys for both these years were very similar. Areas covered included:

- background/personal information,
- where beneficiary receives health care,
- reasons for not using MTF care,
- opinions about health care on a Likert (agree/disagree) scale (wording is very similar to the 1984 beneficiary survey), and
- satisfaction with care received.

# 9. Medicare Current Beneficiary Survey (1991)

The Medicare Current Beneficiary Survey (MCBS) is a much more complex undertaking than the 1984 DoD Health Care Survey. It was reviewed in order to enrich our understanding of medical issues and to understand methods of asking clinical questions. The MCBS is not a mail survey but is conducted by personal interview. Moreover, it is a longitudinal panel survey in which the same set of respondents are interviewed ten times over the course of three years. Like our survey, the MCBS attempts to get information that can be obtained only from a survey. In the case of MCBS, that includes access to care, private insurance coverage, health status and physical functioning of the beneficiary, and income. Like our survey data, the MCBS data will be linked to other data to complete the picture of health care for Medicare beneficiaries and to evaluate health services.

# 10. Report of the Military Health Care Study (1975)

This study involved two surveys: a household survey that included five interviews at monthly intervals and an encounter survey at MTFs. We reviewed the report of the study [2], which did not include the survey instruments. The results were used to estimate present and future beneficiary populations and utilization rates, to assess the beneficiary satisfaction with the MHSS, and to estimate beneficiary use of other methods of payment for health services. Among other results, the report charts population and utilization, compares military health care quality to that of the civilian sector, and tries to estimate relative costs of MTF care and CHAMPUS to see if it is worthwhile to try to shift care in either direction.

# 11. 1991 Guard/Reserve Survey of Officer and Enlisted Personnel

This survey was conducted by the National Guard and Reserve components to find out about the experiences of its members before, during, and after Desert Storm. The data were collected to analyze service members' perceptions of social problems they observed during this period with the goal of "formulation of policies which may be needed to improve the working environment." One questionnaire, for those not mobilized, had 62 closed-ended questions divided into five sections pertaining to military background, individual and family characteristics, activation during Desert Storm, civilian work, and military life. A second questionnaire, for those who were mobilized during Desert Storm, had 105 questions organized in a similar manner. There was a separate sheet at the end for written comments.

# 12. 1991 Navy-wide Personnel Survey

This survey was conducted for the Chief of Naval Personnel by the Navy Personnel Research and Development Center. The data were collected to "evaluate existing and proposed Navy personnel policies, procedures, and programs." The questionnaire had 96 closed-ended questions divided into eight sections pertaining to personnel and career information, rotation and permanent change of station (PCS) moves, recruiting duty, pay and benefits (which includes five detailed questions on medical care), education and leadership, quality of life, organizational climate, and AIDS education. The questions fit well into their sections conceptually without overlapping into other sections. There was a page at the end for written comments. The main part of the questionnaire was highly polished and had a professional look. It was extremely comprehensive and represented a very broad sample of issues whose inherent interest value should elicit carefully completed questionnaires and high response rates. It was successful in focusing on its stated goal.

# 13. 1992 Air Force Health Status Survey

This survey was conducted for the Department of the Air Force by the Office of Health Policy Research, Office of the Surgeon General. The data were collected to assess the ability of the U.S. Air Force (USAF) "to provide [Air Force personnel] with timely access to quality health care at minimum or no cost." The questionnaire was developed in two forms, one for the sponsor (the person whose military service makes it possible for eligible family members to get military health care benefits) and one for the spouse, and has 41 closed-ended questions divided into two sections pertaining to demographics and the respondent's views about his/her health. There was a page at the end for written comments.

# 14. 1992 DoD Survey of Officers

This survey was administered by the Department of Defense to officers of the Army, Navy, Marine Corps, and Air Force. The data were collected for the purpose of 'sampling attitudes and/or discerning perceptions of social problems observed by service members and to support additional manpower research activities." At the time of this analysis, only the health care-related questions were available, so a comprehensive review of the entire questionnaire was not possible. All the health care questions were well-written, straightforward, and easy to answer. The response options were appropriate to the questions, and the scales used were derived from standard scales with proven reliability and validity. The questions reviewed appeared to relate well to the stated goal of the survey.

### III. PRETEST RESULTS

Once an acceptable version of the questionnaire was developed, the questionnaire was ready for pretesting. The purpose of pretesting is to make sure respondents are interpreting the questionnaire as the authors intended. The interpretation of questions and the range of choices offered is explored as well as the clarity of instructions and appropriateness of the reading level. The questionnaire was pretested at Charleston, South Carolina (Navy/Marine Corps), on July 16-17, 1992; Fort Knox, Kentucky (Army), on July 24, 1992; and Dover, Delaware (Air Force), on August 4, 1992. The service representatives on the Survey Working Group recommended the sites and asked the medical commanders at the sites to recruit pretest respondents for separate meetings of officers, enlisted personnel, and retirees. The total pretest population included 27 officers, 47 enlisted personnel, and 46 retirees.

At each meeting, respondents were asked to fill out the questionnaire, marking any questions or instructions that were difficult to understand, incomplete (i.e., did not have the full range of possible answers), or missed the point. After the questionnaires were completed, the OASD(FM&P) staff member conducting the pretest went through the questionnaire asking for comments about the individual questions. Often, discussion and "stories" accompanied questions. As a result of the first two pretests, the questionnaire was revised for the Dover pretest. Most of the modifications to the pretest versions concerned the wording of questions and the exhaustiveness and exclusivity of the response categories.

For categories of responses to be useful, they must be well-defined, univocal, exhaustive, and, where possible, mutually exclusive. Well-defined means that different researchers working independently will sort the same response into the same category. Univocal means measuring only one behavior or opinion with a single category. Exhaustive means the set of response categories account for all conceivable responses to a particular question. Finally, mutually exclusive means a response can be sorted into only one category. Often, responses to questions with the instructions "Mark all that apply" are not mutually exclusive.

The wording of questions needs to be clear, direct, and unambiguous. For example, some pretest respondents were confused about what was meant by 'turrent

location" in regard to residence; about the expression 'living together" as one of the marital status options; and about questions concerning health care finances. There was also some confusion about the category 'eligible family members' included in one question, when the question asked for different eligible family members than in other questions.

Some pretest respondents were also confused about whether to include visits to a doctor in a hospital within the category of "outpatient care." Some also misinterpreted the question about who spent the most time with the family member having the most recent visit for outpatient care. Respondents were answering "me," "spouse," or "grandmother," when the question was meant to ask which health care professional spent the most time with the patient. In the section on hospital stays, some people confused the number of hospital stays with number of nights spent in the hospital during each stay. There was also some confusion about the status of deductibles and co-payments; respondents apparently did not know that deductibles and co-payments belong in the category "Your own or your family's money." On the question about last hospitalization, some people entered both "Spouse" and "Child" when the visit was for childbirth.

Some respondents also thought that, while they have a difficult time getting access to military dental care, they were still eligible for dental benefits. That confusion caused them to skip the dental care section of the questionnaire. Also, there was confusion about whether eligibility for dental benefits included family members. On another question, some people apparently thought that the last column labeled 'Other' meant 'Other medical coverage" instead of "Other family members," which was intended.

The failure to provide an exhaustive range of response possibilities was one of the more common problems with the pretest questionnaire. For example, a number of people entered 'None" for 'Other (specify)" in one of the questions and 'Retired from the military" as the 'Other" option in another question. In some cases, the respondent knew nothing about visits for medical care by other family members and a 'Don't Know" response category had to be added. On one question, "Allergy shots" and 'Follow-up visit after surgery" were added to the response options, and on others, the exclusivity had to be improved since there appeared to be overlap among the choices. It was also important to identify whether the response option 'you" meant just the respondent or included family members. For example, it makes a big difference whether you must compensate for the lack of medical services for just yourself or for your entire family.

The results of the pretest were generally encouraging. All of the problems were solved by improving the precision of question wording, by providing additional instructions in concise, simple language, and by clearly defining categories and response options in accordance with the principles of good category design. The reading level established seemed appropriate. Wherever possible, clinical terms were avoided and common terms used. Respondents were queried about what they did not understand about a question so that ambiguities could be resolved or questions rephrased. The length of the questionnaire did not pose a problem for the pretest respondents. Respondents completed the items within the 30 minutes established as a maximum. For single members without dependents and in good health, the questionnaire took only 10 minutes on average to complete.

### IV. FINAL SURVEY INSTRUMENT

#### A. OVERVIEW

The final survey instrument (reproduced as Appendix A) consists of 109 questions organized into the following seven sections plus a Comment Sheet:

- Sponsor and Family Information,
- Health Care Benefits.
- Recent Medical History,
- Most Recent Visit for Outpatient Care,
- Most Recent Hospital Stay,
- · Most Recent Dental Visit, and
- General Information.

Each of these sections is described below.

# 1. Sponsor and Family Information

The first 19 questions ask for demographic and geographic information, such as family size, location, income, age, employment status, income sources, and income.

#### 2. Health Care Benefits

In this section (Questions 20-33), the survey addresses CHAMPUS benefits, beneficiaries' insurance coverage, and their knowledge of their military health care benefits. Beneficiaries whose families are eligible for CHAMPUS are asked about the type of coverage and who pays for it. Some basic informational questions are asked to determine respondents' familiarity with the Military Health Services System. All respondents are asked if they know whom to contact or where to get information on various aspects of the system such as DEERS enrollment procedures.<sup>2</sup> Those eligible for CHAMPUS coverage are asked about the level of CHAMPUS deductibles and copayments.

<sup>&</sup>lt;sup>2</sup> The Defense Enrollment Eligibility Reporting System (DEERS) is a system for maintaining control over access to military health care services by authorized persons; enrollment is mandatory for non-emergency medical care.

# 3. Recent Medical History

The section on recent medical history (Questions 34-49) collects health status and health care utilization data. For each family member, we ask for health status, number of outpatient visits in the last year, number of hospital nights in the last year, number of outpatient visits anticipated in the next year, and whether family members anticipate any inpatient stays in the next year. This information will be a major data source on total utilization by military beneficiaries.

To enrich the utilization analysis, more detailed information is requested for a 'randomly-selected' family member. Random selection is made by choosing the person with the most recent birthday. In other sections of the questionnaire, questions are asked regarding the person with the most recent outpatient visit or hospital stay. For the analyses of satisfaction, questions about the most recent visit will elicit responses from people who are familiar with the system and have used it recently. However, for the analyses of utilization levels, information on the most recent visit is biased toward people who have high utilization, and a randomly-selected family member is therefore more appropriate.

# 4. Most Recent Visit for Outpatient Care

This section (Questions 50-71) addresses the most recent visit for outpatient care for the person in the family with the most recent visit, provided that visit occurred within the last six months. Questions ask for the reasons for the visit, and the location and type of medical facility visited. Also considered are objective access measures such as the number of phone calls needed to make an appointment, the patient's overall satisfaction with care as well as with specific aspects of the facility and staff, time medical professionals spent with the patient, and sources of funds used to pay for the visit.

# 5. Most Recent Hospital Stay

This section (Questions 72-89) asks questions parallel to those in the outpatient section, but about the most recent hospital stay. Because patients are more likely to recall a hospital stay than an outpatient visit, respondents are asked to answer the questions if anyone in the family had a hospital stay within the last year. As with outpatient care, respondents are asked to rate their satisfaction with the overall quality of care and with specific aspects of the facility and staff, to report the type and location of the hospital, and to report the sources of funds that were used to pay for the stay. Also asked is whether surgery was performed during the stay and whether the patient was admitted from the emergency room.

#### 6. Most Recent Dental Visit

The section on dental care (Question 90-99) asks for the reason for the most recent visit (provided it is within the last six months), the type and location of the facility, satisfaction with aspects of the facility and staff, and overall satisfaction with the care received.

#### 7. General Information

This section (Questions 100-109) contains questions that did not reasonably belong in any of the previous sections. Respondents are asked about reasons for family members not getting health care when they wanted to, and about satisfaction with the overall military health care benefit. They are also given a list of possible concerns about military treatment facilities (such as difficulty getting an appointment) and are asked if they have any of these concerns. To get respondents' views of alternative medical plans, the questionnaire posits two hypothetical choices, a civilian HMO and a military HMO, and asks respondents whether they would prefer each HMO to the current system, at various charges. Women are asked about their satisfaction with specific aspects of obstetrical and gynecological care, including the ability to get routine tests and availability of appointments. Finally, respondents are asked who completed the questionnaire, when it was completed, and whether they have any comments.

#### 8. Comment Sheet

Enclosed with the questionnaire is a Comment Sheet. The respondent is asked to provide some background information on the Comment Sheet plus his/her written comments. The background information is needed because the Comment Sheet will be separated from the rest of the survey and a random sample of 6,000 will be analyzed.

#### B. ISSUES ADDRESSED BY THE QUESTIONNAIRE

The questionnaire is designed to address all the congressionally-mandated issues, as well as additional issues that were important to OSD. Table IV-1 contains a cross-reference list of the survey issues and the questions that address them.

Table IV-1. Survey Issues and Related Questions

Survey Issue

**Survey Question Numbers** 

Access to and use of inpatient and outpatient health care services:	
(A) By source of care and source of payment, including private health insurance	24, 25, 27-30, 46, 47, 49, 56-67, 71, 78-80, 82-85, 89, 95-98, 100, 101
(B) In relation to civilian-sector standards established for particular clinical services	34-38, 44, 48, 57, 78, 81, 95
2. Attitudes and knowledge regarding:	
(A) The quality and availability of health and dental care under the MHSS	20, 26, 68-70, 86-88, 99, 102, 104
(B) Their freedom of choice with respect to health care providers and level of health care benefits	20, 26
(C) The premiums, fees, co-payments, and other charges imposed under the MHSS	20-23, 68-70, 86-88, 99
(D) Any changes in the rules, regulations, or charges that characterize the MHSS	21-23
3. Valuation of health care benefits	31-33
4. Utilization of preventive health care services	45
5. Satisfaction with OB/GYN services	103
6. Expected utilization of health care facilities in the future	39, 40
7. Hypothetical use of new kinds of health plans	105, 106

#### V. SAMPLING PLAN

#### A. DEVELOPMENT OF SURVEY SAMPLING PLAN

Based on related survey analyses and discussions with the Survey Working Group members and staff, a consensus was reached that the variables with the strongest likely impact on the study outcomes (access, utilization, satisfaction, etc.) are beneficiary category, family status (with or without dependents), and geographic region. The beneficiary categories are:

- junior enlisted (E-1 to E-4),
- senior enlisted (E-5 to E-9),
- officers (warrant and commissioned),
- retirees under age 65,
- retirees age 65 and over, and
- survivers of deceased service members.

Active-duty personnel are required to use military treatment facilities for their care unleas the required services are unavailable. Family members, however, may use civilian medical facilities for most of their outpatient care, and for inpatient care if they reside more than 40 miles from a military hospital. Junior enlisted personnel tend to be in better health and to have lower family incomes than the other beneficiary groups. These factors will determine freedom of choice in selecting military or civilian health care providers and will affect utilization rates. In addition, the military is a hierarchical system based on rank and, consequently, paygrade and whether one is enlisted or an officer may affect access to health care (this is not a matter of official policy but it is a fact of life in the military). Retirees are older, need more health care, and reside farther from military treatment facilities. Once retirees reach age 65, they become eligible for Medicare and lose their CHAMPUS eligibility. These considerations led to the beneficiary categories given above.

Over the past several years, numerous military health care initiatives and demonstration projects have been implemented across the country. These initiatives vary in scope, features, and cost by geographic region. All are designed to save the government and the beneficiary money by providing more efficient management and delivery of health care services. To facilitate the generation of the sample, Vector Research Incorporated (VRI) developed a mapping of zip codes to the proposed regional stratification groups defined by the health care initiatives and demonstration projects. Estimates of the beneficiary populations in these groups were then produced. Several iterations of the mapping and estimating had to be performed,

because the resulting population estimates often provided information that led to redefinition of the regional stratification groups. At the end of this process, 14 major groups with large beneficiary populations were identified:

- Army Catchment Area Management (CAM) sites,
- Army Gateway to Care sites,
- Navy CAM sites,
- Air Force CAM sites,
- CHAMPUS Reform Initiative (CRI) sites,
- TRICARE (Tidewater region) sites,
- MTFs in overlapping catchment areas,
- Southeast region Fiscal Intermediary/Preferred Provider Organization (FI/PPO),
- PRIMUS/NAVCARE sites,
- New Orleans CRI-like demonstration,
- Noncatchment areas.
- Outside the 50 states.
- · No initiatives, and
- Shipboard.

Descriptions of these groups and their associated initiatives are given in Appendix B. Classifying sponsors by family status, survey region, and beneficiary category yields 73 stratification cells (not all combinations are represented). These cells constitute the first stage of the sampling plan.

The traditional rationale for stratification is to use the reduced variance in homogeneous groups to obtain a better estimate of a population parameter (such as a satisfaction rate). That was a factor in the decision to stratify by beneficiary category and region. In the case of this survey, there is a second reason for stratification—to ensure that the sample is large enough to identify any differences in responses among different groups.

# B. MATCHING ZIP CODES TO SURVEY REGIONS

Drawing a stratified sample for the beneficiary survey requires a link between the beneficiaries and the various regional stratification groups. The method adopted involves constructing a mapping that first links the zip codes of beneficiaries to catchment and noncatchment areas, and then maps these areas to the regional stratification groups. This section describes the construction of this mapping.

Since inpatient catchment areas (a catchment area is defined as a 40-mile-radius region around a military hospital, with allowances for natural barriers) and noncatchment areas are already mapped to the regional stratification groups, a mapping of beneficiary zip codes to survey groups can be obtained by first mapping the zip codes to inpatient

catchment areas. The Defense Medical Information System (DMIS) maintains an inpatient catchment area directory that served as the starting point for this mapping. Catchment areas for hospitals that are slated for downgrading to clinic or aid station status and eventual closure were deleted. Specifically, catchment areas were deleted if they were defined in the 30 September 1991 DMIS catchment area directory for a hospital that will no longer be a hospital on 30 September 1992, based on the Services' Base Realignment and Closure (BRAC) Act II transition plan.

Beneficiaries with zip codes within 40 miles of more than one hospital are allocated to the closest hospital of the same service branch as their sponsor. However, if the closest hospital of any service branch is more than ten miles closer than the hospital of the same service branch, the beneficiary is assigned to the closest hospital. A noncatchment area in the United States consists of the zip codes within a state that are not in a catchment area.

Besides the inpatient catchment areas defined in the standard DMIS catchment area directory, a special set of additional "catchment areas" were used. These special areas include areas around Uniformed Services Treatment Facilities (formerly Public Health Service hospitals), the New Orleans area, and the area around Fort Drum (the latter two areas were considered because new health care initiatives are being implemented there). Zip codes for each of these areas were also obtained from the DMIS.

Since the unique assignment of beneficiaries to catchment areas in overlapping areas depends on the sponsor service branch and the service branch of military hospitals, assignment to survey groups may also depend on service branch. Beneficiaries in zip codes that are not mapped to catchment areas are assigned to noncatchment areas based on the first three digits of their zip code.

#### C. DETERMINATION OF SAMPLE SIZE

The formula for the sample size when a simple random sample is taken within each survey stratification cell is [3]:

$$n = \frac{\frac{t_{\alpha}^{2}P(1-P)}{d^{2}}}{1 + \frac{1}{N} \left(\frac{t_{\alpha}^{2}P(1-P)}{d^{2}} - 1\right)}$$

$$\approx \frac{n_{0}}{1 + (n_{0} \cdot N)},$$

where P is the true (unknown) population proportion, N is the population size, d is the degree of precision desired,  $t_{\alpha}$  is the abscissa of the normal probability curve that cuts off an area  $\alpha$  at the tails, and  $n_0 = t_{\alpha}^2 P(1-P)/d^2$ . If  $n_0/N$  is negligible, the denominator is effectively equal to 1, and the sample size becomes  $n = n_0$  (if  $n_0/N$  is not negligible within a cell, the effect of assuming it is negligible is to increase the estimate of sample size). Further, if the sample size estimate is scaled to account for expected non-response, the sample size needed is  $n = n_0/r$ , that is,

$$n = \frac{t_{\alpha}^{2} P(1 - P)}{r d^{2}} , \qquad (1)$$

where r is the response rate.

The sample size estimates for each cell are based on the following assumptions:

- The quantity being measured is a population proportion, such as a satisfaction rate.
- The true population proportion is 0.5. This gives the maximum possible variance in the sample proportion and yields the most conservative (i.e., on the high side) estimate of the sample size needed.
- The degree of precision desired in the estimated proportion is  $\pm 0.05$  (i.e., we want the sample proportion to be within  $\pm 0.05$  of the true population proportion).
- The probability that the sample proportion will be within  $\pm 0.05$  of the true population proportion is 0.95.
- The population size in each cell is effectively infinite, so that finite-sample corrections need not be employed. The effect of this assumption is a more conservative estimate of the necessary sample size.
- The response rate in each cell is 65 percent.

Although it is known from past experience that the response rate will vary by beneficiary type (enlistees, officers, retirees, etc.), service, and other beneficiary attributes, there are two reasons why a constant response rate is assumed for the purpose of sample size computation. First, the total sample size was constrained to a maximum of about 45,000 sponsors. This means that increasing the sample size in cells with low expected response rates will necessarily result in decreasing the sample size in cells with higher expected response rates, that is, good responders will be penalized in favor of poor responders. Second, inflating the sample size to account for expected non-response does not necessarily increase the precision of the quantity being estimated, that is, the response rate will still be low and the estimates will be biased.

Based on the assumptions stated previously,  $\alpha = .025$ ,  $t_{\alpha} = 1.96$ , P = .5, d = .05, and r = .65. Substituting these values into equation (1) gives:

$$n = \frac{(1.96)^2(.5)(.5)}{(.65)(.05)^2}$$
$$= 591.$$

This number was rounded down to 590 and became the sample size selected in each cell of the Stage 1 sampling plan. The cells in the sampling plan are defined in the next section.

#### D. FINAL SAMPLING PLAN

Tables V-1 and V-2 contain the Stage 1 and Stage 2 sampling plans for the survey. The total planned sample size is about 45,000. The Stage 1 plan was based on the initial framework for the study. The Stage 2 plan was added to accommodate requests for oversampling Army enlisted personnel (RAND Corporation) and reserve retirees (Office of the Assistant Secretary of Defense (Program Analysis and Evaluation)) [OASD(PA&E)].

The Stage 1 sampling plan uses the health care initiatives described in Section A to stratify the active-duty beneficiaries with dependents and the retirees only. The remaining categories are active-duty beneficiaries without dependents, and survivors. The former are required to use military treatment facilities and are unlikely to be greatly affected by the health care initiatives. The latter are relatively few in number and most are over 65 without eligible children. We therefore chose to sample relatively few of these beneficiary groups—590 each of junior enlisted, senior enlisted, officers, and survivors—and not to stratify that part of the sample by health care initiative.

The Stage 2 sampling plan adds 760 Army enlisted personnel, stratified by pay group and catchment area, to the sample. It also adds reserve retirees as a separate group—590 who are under age 65, and 590 who are age 65 and over. The Stage 2 plan was added to accommodate requests for oversampling Army enlisted personnel (RAND Corporation) and reserve retirees [OASD(PA&E)].

Table V-1. Stage 1 Sampling Plan

# VI. SURVEY SCHEDULE AND PREPARATION FOR ANALYSIS

#### A. SURVEY SCHEDULE

The final comments of the Survey Working Group and the Integration and Study Management Group were incorporated and the questionnaire prepared for printing. The survey was fielded in late November 1992. Table VI-1 shows the survey mailing schedule and intended recipients.

Table VI-1. Survey Mailing Schedule

Mailing	Approximate Date	Recipients
First	Late November 1992	Active-duty sponsors and retirees
Second	Late February 1993	Active-duty sponsors and retirees
Third	Early March 1993	Survivors
Fourth	Mid-April 1993	Active-duty sponsors and survivors

Responses will be accepted through mid-May 1993. Shortly thereafter, a final data tape will be prepared and analyses will be performed. The final report of the survey analysis results will be delivered in time to integrate the diverse aspects of the study into a final report to Congress in December 1993.

#### **B. PREPARATION FOR ANALYSIS**

Four preparatory steps are required before the survey data are ready for analysis:

- augment the database with demographic and geographic information,
- perform data integrity checks and prepare final analysis file,
- · weight the survey data, and
- perform tabulations of survey responses.

These steps are explained in the following subsections.

# 1. Augment the Database With Demographic and Geographic Information

The purpose of augmentation is to increase the analytical capabilities by using data not included in the survey. A description of the augmentation of the beneficiary survey data, including the classes of information and potential sources that could be used is as follows:

• Location information. Using the zip code and sponsor service branch of the respondent, in combination with the catchment area directory, we can assign the

respondent to a catchment area. This assignment will link the respondent to a variety of information about the catchment area (see Catchment Area Military Resources, discussed next). The survey also asks the respondent to identify where care was provided. The zip code of the respondent and the zip code of the facility providing care can be used in combination with latitude and longitude coordinates of zip code centroids to estimate the distance to the facility.

- Catchment Area Military Resources. The amount of direct care workload capacity in the area can be described in terms of the amount of health care workload that was provided by military treatment facilities. This workload can be described in terms of visits and dispositions, or in terms of adjusted case mix by inpatient work units and ambulatory work units. Information regarding numbers of non-availability statements (statements issued by MTFs indicating that space or needed services are unavailable at the facility and authorizing care under CHAMPUS) issued also helps describe the military resources available.
- Catchment Area Civilian Resources. The Area Resource file contains information regarding civilian resources by county. The degree to which counties can be matched with catchment areas will determine the feasibility of using this source of information. Any zip code information can be easily mapped to catchment area.
- Catchment Area Demographics. The demographic composition of the catchment area is readily available through the DMIS catchment area beneficiary population reports. Data available include estimates of the population by beneficiary type (active duty, dependents of active duty, retired, dependents of retired, survivor of deceased sponsor), age group, sex, and service branch. The data used to produce the standard reports also include age and rank of active-duty sponsor.
- Respondent Information. Both respondents and non-respondents to the survey
  can be linked to their DEERS records and to personnel files. Thus, we will be
  able to determine whether respondents differ demographically from nonrespondents. When FY92 Biometrics (detailed individual patient workload data
  for care received in MTFs) and CHAMPUS claims data become available, it
  may even be possible to determine whether frequent users of the military medical
  system were more likely than occasional users to have responded to the survey.

# 2. Perform Data Integrity Checks and Prepare Final Analysis File

Invalid and inconsistent responses need to be screened and, if possible, resolved. Data integrity checks will first be performed to identify inconsistent responses (for example, a sponsor indicating no dependents in one question but responding to other questions about care received by family members). Whenever possible, algorithms for resolving inconsistent responses will be developed and the affected responses will be changed to eliminate the inconsistencies.

# 3. Weight the Survey Data

At a minimum, the sample responses will be weighted to reflect the population distributions of the variables used to stratify the sample. In addition, weights will be created to reflect survey non-response rates (for the entire survey, not individual items) and other post-stratification variables (i.e., variables, such as service, not used for stratification at the design stage) thought to influence the population parameters of interest (access, satisfaction, etc.).

# 4. Perform Tabulations of Survey Responses

Initial analyses will be relatively simple, involving primarily weighted tabulations, such as the percentage of the sample or a subsample responding in a given way to a question, and graphs to aid in the visualization of relationships among variables. Depending on the results of the initial exploratory analyses, more complex methods, such as regression, logit, ordered logit, or analysis of variance will be used to examine and test the relationships underlying the tabular or graphical results.

# THE 1992 NoD HEALTH CARE SURVEY

RCS: DD-FM&P (OT) 1903

# 1992 DoD Health Care Survey

#### **SURVEY PURPOSE**

The Department of Defence is conducting an effort to evaluate and improve the Military Health Services System. As part of this effort, DoD is conducting a survey of recipients of military health care benefits to examine (1) access to and use of inpetient and outpatient medical care services and (2) attitudes and knowledge regarding the Military Health Services System's policies, benefits, and costs. You and your family have been selected to participate in this important survey. Please read the instructions before you begin the questionnaire.

#### **PRIVACY NOTICE**

**AUTHORITY: 10 U.S.C. 136** 

PRINCIPAL PURPOSE OR PURPOSES: information collected in this survey will be used to sample attitudes toward and use of the Military Health Services System. This information will assist in the formulation of policies that may be reeded to improve the Military Health Services System.

**ROUTINE USES: None** 

DISCLOSURE: Voluntary, Failure to respond will not result in any penalty to the respondent. However, maximum participation is encouraged so that the data will be complete and representative. Your survey questionnaire will be treated as confidential. Any identifiable information will be used only by persons engaged in, and for the purposes of, the survey. Only group statistics will be reported.

In the civilian sector, health insurance is often peld for jointly by employer and employee contributions, and the employee has a range of choices about the kinds of insurance provided. In the military, uniform health care is provided by the government either at Military Medical Treatment Facilities or through CHAMPUS or MEDICARE.  Assuming that the total value of your pay (active-duty or	services would be up for the additions	paid <u>an ad</u> tack of the il monthly a	area where of the second and the sec	rvaliable a thiy allows How muci you think	nd that you <u>ince</u> to mai h of an

IV MOST RECENT VISIT FOR OUTPATIENT CARE	-	000	Very gr Good Fair Poor								
In this section, you will be select questions about the <u>most</u> ICENT visit for outpatient care, to either a civilian or military sedical facility, by a family member (sponsor, spouse, hild, or other dependent) who is eligible to receive <u>military</u> sedical benefits. By outpatient care we mean any service or procedure that does not require an overnight stay in the ospital. This includes visits to doctors, clinics, hospitals, and emergency rooms if not admitted. It does not include leits for dental care, oral surgery, or prescriptions.	54	This visco ooo	nkina	outpe presci the is on 1 s on 3 s	tient of ription at 30 a and 3 a and 6 a	ere (c 16), wi days north north	io noi hen w s ago s ago	inclu es it?	do vit	its fo	r dental
Which ELIGIBLE family member made the MOST RECENT visit for outpetient care? If 2 or more family members made an outpetient visit at the same time, please select the oldest. If possible, please consult this person for the remainder of this section.	1 8	adio	temit; ;el tec llowin	ility w	res 6 (	monti	16 800	nt <i>ou</i> l o or le se GO	es, pi	nt viei sees t UEST	to a inewer ION 72.

Suppose there was a <u>new kind of military health plan</u> and you could choose the new plan or continue to get your health care the way you do now. Questions 105 and 106 ask you to compare your <u>current military plan</u> as it is now with two new plans, and to answer whether or not you would change.

IMPORTANT: Answering these questions will not affect your current military health plan. These questions are for research purposes only and do not describe actual plans that exist now.

105. The first new military health plan we want you to consider is a CiVILIAN Health Meintenance Organization or HMO. Suppose this plan offered the services and benefits listed in Table 1 below. A decision to change to this plan means you would use it instead of military medical treatment facilities or CHAMPUS.

TABLE 1: DESCRIPTION OF NEW MILITARY HEALTH PLAN #1

SERVICES COVERED:	Same as CHAMPUS but includes adult annual physical exams and
	routine eye care
CHOOSING YOUR HOSPITAL AND DOCTOR	
CHOOSING A HOSPITAL:	Use the civilian hospital associated with the plan
CHOOSING A DOCTOR:	Visit doctor at the plan facility.
YOUR SHARE OF THE COST OF SERVICES	
HOSPITAL STAYS:	No charge for aponsor or family members
OUTPATIENT DOCTOR VISITS:	Sponsor and family members pay \$5 per visit.
YOUR ABILITY TO GET AN APPOINTMENT:	For routine physical exam: appointment in 3 days.
	For illness that is not serious: appointment in 2 days.
	For senous illness: same day appointment.
	If care is not available from the plan's doctor, you will be sent to
_	another doctor.

Would you join this new plan instead of your current MILITARY HEALTH PLAN?

		_NO_
a. If there was a charge of \$75 per month per family	Ũ	O
b. If there was a charge of \$50 per month per family	0	Ō
c. If there was no charge to join	Õ	Ō

106. The second new military health plan we want you to consider is a military HMO. This plan would offer the benefits and services listed in Table 2 below. A decision to change to this plan means you would no longer be able to use CHAMPUS. If you do not live near a military hospital, consider what you would prefer if you did live near a military hospital.

TABLE 2: DESCRIPTION OF NEW MILITARY HEALTH PLAN #2

SERVICES COVERED:	Same as CHAMPUS but includes adult annual physical exams and routine eye care.
CHOOSING YOUR HOSPITAL AND DOCTOR	
CHOOSING A HOSPITAL:	Use the military hospital.
CHOOSING A DOCTOR:	Visit doctor at the military hospital
YOUR SHARE OF THE COST OF SERVICES	
HOSPITAL STAYS:	No charge for sponsor or family members
OUTPATIENT DOCTOR VISITS:	Sponsor and family members pay \$5 per wart
YOUR ABILITY TO GET AN APPOINTMENT:	For routine physical extern: appointment in 3 days.
	For liness that is not serious: appointment in 2 days.
	For senous liness: seme day appointment.
	If care is not available from the plan's doctor, you will be earn to
	another doctor.

Would you join this new plen instead of your current MILITARY HEALTH PLAN?

#### COMMENT SHEET

THE FOLLOWING QUESTIONS SHOULD BE ANSWERED BY THE PERSON MAKING COMMENTS.

What is your beneficiary status?

- O Active duty service member
- O Retired service member
- O Survivor of deceased service
- O Spouse or other family member

Are you:

- O Male
- O Female

In which military service does (did) the sponsor serve?

- O Army
- O Marine Corps
- O Navy O Coast Guard
- O Air Force

What is your current location?

- O Within the 50 American states
- O Outside the 50 American states
- O Aboard ship

PLEASE USE THIS AREA FOR ANY COMMENTS YOU MAY HAVE. IF YOU NEED ADDITIONAL SPACE, USE THE BACK SIDE OF THIS PAGE.

## APPENDIX B

# HEALTH CARE INITIATIVES AND REGIONAL STRATIFICATION GROUPS

#### APPENDIX B

## HEALTH CARE INITIATIVES AND REGIONAL STRATIFICATION GROUPS

Through discussion among project staff members, a list of the catchment areas participating in various military health care initiatives and demonstration projects was assembled. This list, in combination with the geographic locations of military hospitals, formed the basis for the assignment of military hospital catchment areas to the stratification groups shown in Chapter V. A description of each of these stratification groups is given below.

#### 1. Army Catchment Area Management

This group consists of the Army catchment areas involved in catchment area management (CAM). The purpose of CAM is to show that the escalating cost of CHAMPUS can be contained by giving the local hospital commander fiscal responsibility for and management authority over all care rendered in the catchment area. CHAMPUS funds, in effect, are turned over to the local military hospital commander, who manages the health care for all catchment area beneficiaries, whether they receive their care in the civilian community or in the military hospital. The CAM model of integrated health care delivery is based on the assumption that the local hospital commanders know the needs of their beneficiaries, the capabilities of their military assets, and the nature of their local medical communities. Among the mechanisms used in connection with the Catchment Area Management model are means such as the 'health care finder system' to assist beneficiaries with referrals to care, and a system of enrollment in one of several alternative programs.

#### 2. Army Gateway to Care

Gateway to Care is the label applied to the Army's implementation of the DoD Coordinated Care Program. The centerpiece of the program is a local health care delivery system based on arrangements between military and civilian health care organizations managed by the MTF commander. Beneficiary enrollment allows local MHSS managers to plan and provide care to a defined, enrolled population. A primary care case manager refers the enrolled beneficiary to other sources of care as needed. The program is further characterized by improved education of beneficiaries regarding options available in

seeking health care and how to maintain and improve their own health status through family risk management, diet, exercise, and appropriate use of health services.

#### 3. Navy Catchment Area Management

This group consists of the Navy catchment area management site. The Navy selected Naval Hospital, Charleston, South Carolina, as the site for its CAM demonstration based on an anticipated ability to demonstrate alternatives to standard CHAMPUS-funded treatment as well as to prove the applicability of CAM at a typical Navy medical installation.

#### 4. Air Force Catchment Area Management

This group consists of the two Air Force catchment area management sites, Luke Air Force Base (AFB) and Bergstrom AFB. The purpose of the Air Force CAM project is to demonstrate that the rapidly rising rate of expenditures by OCHAMPUS (Office of the Civilian Health and Medical Program of the Uniformed Services) within two catchment areas can be contained while maintaining or improving accessibility, patient and staff satisfaction, and health care quality. This is to be accomplished by vesting in the MTF commander the authority to manage the MTF budget (comprised of operating and maintenance and investment equipment dollars) and the CHAMPUS funds allocated for the catchment area. The commander must then provide or obtain health care services required to meet the needs of the beneficiary population within the catchment area.

#### 5. CHAMPUS Reform Initiative

The objectives of the CHAMPUS Reform Initiative (CRI) are to apply generally-accepted managed care techniques to the CHAMPUS program in order to contain costs and enhance services. The government awarded a contract that requires the government and the contractor to share financial risk for all health care services provided in the civilian sector to CHAMPUS beneficiaries in California and Hawaii. Three alternatives are available to beneficiaries in this demonstration: (1) CHAMPUS Prime, an enrollment program that features enhanced CHAMPUS benefits such as new preventive care benefits and reduced beneficiary cost-sharing requirements while preserving all other CHAMPUS benefits; (2) CHAMPUS Extra, which has no enrollment incentives but provides a contracted provider network of care; and (3) Standard CHAMPUS.

CRI activities/services include enhanced benefits, improved coordination between the military and civilian components of the MHSS, increased access to care, and enhanced quality assurance activities.

#### 6. TRICARE (Tidewater Region)

The purpose of this demonstration project, which began in October 1992 in the Tidewater, Virginia, area (USAF Hospital Langley, McDonald Army Hospital Fort Eustis, and Naval Hospital Portsmouth) is to show the effect of pooling medical assets across a service area. The TRICARE program offers three options for enrolled beneficiaries: (1) the Preferred Plan HMO, in which TRICARE selects the primary care provider from MTF, NAVCARE, and civilian providers in the network, while the beneficiary pays a reduced cost share; (2) the Choice Plan PPO, in which beneficiaries get a list of approved network providers, pay a 20-25% standard deductible based on the discounted network rate, and are assured of no balance billing by the provider; and (3) standard CHAMPUS. Standard CHAMPUS provides maximum freedom of choice but also maximum beneficiary cost. All active-duty members are automatically enrolled in the Preferred Plan HMO. All other DEERS-eligible beneficiaries may select from all three options. Medicare beneficiaries may choose either the Preferred Plan or the Choice Plan.

#### 7. Overlapping Catchment Areas

These catchment areas contain a significant fraction of beneficiaries whose zip code is within 40 miles of more than one facility. Beneficiaries in overlapping catchment areas are assigned to the MTF of the same service branch or to the MTF of another service branch if it is more than ten miles closer. These beneficiaries, however, may receive care at more than one facility.

## 8. Southeast Region Fiscal Intermediary/Preferred Provider Organization

The Southeast Region Fiscal Intermediary/Preferred Provider Organization (FI/PPO) provides for CHAMPUS fee discounts and utilization management. While initially operative in Florida and Georgia in July 1988, it has been extended to cover the entire Southeast region. The purpose of the Southeast Region Fiscal Intermediary Managed Care Program (MCP) is to offer an efficient and cost-effective alternative health delivery system to regular CHAMPUS that complements and is coordinated with the MTFs. The MCP is designed to reduce CHAMPUS health care costs while maintaining quality of care.

The foundation of the MCP exists in the establishment and operation of point-ofservice preferred provider networks (institutional and professional) in coordination with the MTFs, implementation and operation of quality assessment and utilization management programs, and establishment and implementation of a marketing (education) program. The MCP includes the placement of experienced, full-time, fiscal intermediary employees at the MTFs in the Southeast region. These individuals provide on-site coordination between the MTF staff, the networks, and the fiscal intermediary.

To encourage the use of the network providers, the MCP offers cost-share reductions and additional health care benefits for CHAMPUS beneficiaries using the MCP network; the objective is to maximize the use of the network providers by current CHAMPUS users.

#### 9. PRIMUS/NAVCARE

PRIMUS/NAVCARE consists of contractor-owned and -operated primary care clinics established near heavily-utilized military hospitals to augment the delivery of basic outpatient services. PRIMUS/NAVCARE clinics are considered by the services to be an extension of the parent MTF, not unlike a branch military clinic.

#### 10. New Orleans CRI-Like Demonstration

This CRI-like demonstration project in the New Orleans, Louisiana, area is administered by the Office of Coordinated Care Operations in the Office of the Deputy Assistant Secretary of Defense (Health Services Financing) and OCHAMPUS.

#### 11. Noncatchment Areas

This group consists of the state-based areas that are not allocated to any catchment area and that are not in any of the other groups.

#### 12. Outside the 50 States

This group consists of locations outside the continental United States, Alaska, and Hawaii. The group includes overseas catchment and noncatchment areas.

#### 13. No Initiatives

This group contains the remaining catchment areas not elsewhere grouped.

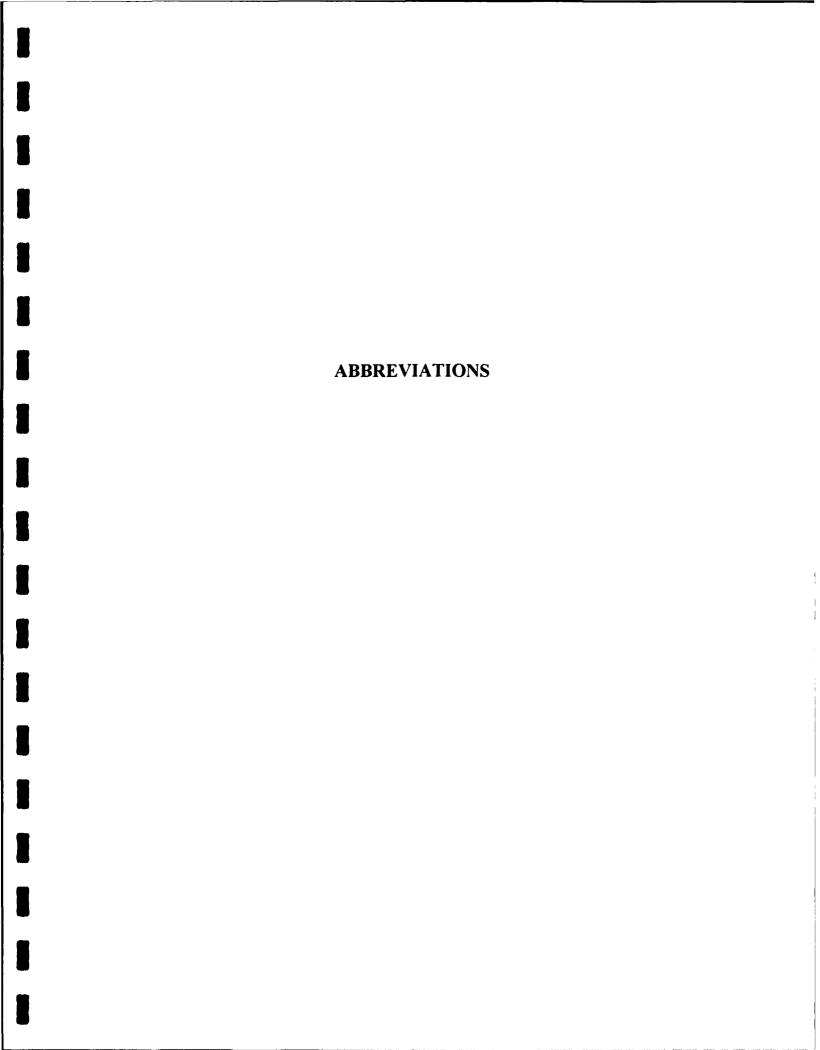

#### 14. Shipboard

This group consists of all Fleet Post Office (FPO) addresses.
